Model	Precision (Fraud)	Recall (Fraud)	F1-Score	ROC-AUC	Strengths	Weaknesses
Logistic Regression	0.06	0.92	0.11	0.97	High recall (detects most fraud cases)	Very low precision (many false positives) ❌
Random Forest	**0.87**	0.83	**0.85**	0.974	Best balance of precision & recall, high F1-score, stable performance ✅	Slightly lower recall than Logistic Regression
XGBoost	0.63	0.85	0.72	**0.978**	Highest ROC-AUC, strong generalization	Lower precision than Random Forest
Artificial Neural Network (ANN)	0.60	**0.87**	0.71	0.977	High recall, captures complex patterns	Lower precision, risk of overfitting on SMOTE data
